

RCO basic training

The basic training we cover the RCO-D system from the installation of the hardware up to the programming of the first project. This lays the foundation for projecting small to medium sized sites.

DURATION AND VENUE:

The training takes 3 days, starting at 9:00 to 17:00.

It takes place in our training center, August-Borsig-Strasse 9 in 78467 Konstanz Germany.

REQUIREMENTS:

A general knowledge of HVAC applications as well as a solid understanding of Windows 10 PCs. You don't need any hard- or software of your own.

TOPICS:

Introduction to the Controlesta RCO-D hardware system.

- installation and topology of the RCO-D hardware (Master- and Networkcontroller, bus-modules)
- Single room and fan coil controllers
 - Hardware installation
 - Network layout

Learning the RCO-tool by programming an example site:

- system overview
- Creating a project
- Makro programming with the fully integrated modules
- Local and web visualisation
- Project tree
- Simple text programming
- Editing existing program modules and creating new ones from scratch
- Communication controller and tool
- Communication controller and controller
- FTP communication
- Setup of the RCO touch panels

We are looking forward to your visit!
